

# **BI03176 – Animal Behaviour Key Words Habitat**

Tern nesting  
Black-throated blue warbler  
Fitness effects  
Source habitat  
Sink habitat  
Predatory Pike  
Ideal Free Distribution Theory  
Migration  
Reduce competition  
Chimpanzee patrols  
Territory expansion  
Yarrow's spiny lizard  
Costs of territoriality  
Testosterone  
Immune function  
Food supplement  
Long-horned beetle  
Pseudoscorpion  
Decaying trees  
Varying aggression  
American Redstarts  
Habitat quality  
Territoriality contests  
Resident advantage  
Butterfly combats  
Resource-holding power  
Residency  
Honest signaling  
Red-shouldered Widowbird  
Feather colour  
Black-winged Damselflies  
Residents  
Floaters  
Selection for endurance  
Age-related effects  
Conditional strategy  
Risky behaviour  
Dear-enemy hypothesis  
Investments in habitat  
Know your neighbour  
Fiddler Crabs

Territory boundary disputes  
Intruders  
Asymmetrical payoff  
Tarantula Hawk Wasp  
Poplar aphids  
Parthenogenetic reproduction  
Petiole galls  
Dispersal  
Belding's Ground Squirrel  
Family assistance  
Heterozygosity  
Inbreeding depression  
Lion prides  
Dispersal away from male dominance  
Migration  
Arctic Tern  
Habitat quality deterioration  
Breeding grounds  
Decreased predation pressure  
Short-range migrations  
Habitat quality  
Three-wattled Bellbird  
Annual migratory cycle  
Long-distance migration  
Swainson's Thrush  
Phylogenetic analysis  
Costs of migration  
Optimality model  
Flying-V formation  
Great White Pelicans  
Wing-beat efficiency  
Red-eyed Vireo  
Flying over water  
Physiological endurance  
Fat reserves  
Benefits of migration  
Monarch  
Microhabitat sites  
Frost insulation  
Forest conservation efforts  
Conditional migration  
European blackbird  
Resident bird  
Migrant bird  
Social status  
Territoriality
